

Successes

- We finish most of the main functionalities that are required by Product Champions, and get approval from them.
 - We hold a meeting with our production champions. They are fully satisfied with our product design and processing. They saw most of the features are implemented.
- Team members are getting more familiar with the skills and knowledges that are going to be used in the project, and the works will be finished more efficient in later sprint.
 - As a developer, we learned lots of new programming technologies; for example, Django web server setup, HTML web page design with integration of Bootstrap, and Android app development, etc.
- Improved on teamworking skills.
 - We made a strong friendship to each other.
 - Our team mostly worked in pairs.
 - Everyone in our team was assigned more than one task.
 - Most of us are willing to provide help to each other, and solved big problems in a team scope most of the time.

Improvements

- Interface Design
 - We are planning to build a better looking interface on the website. It should be more professional.
 - First, we need to do some research on website design to learn how to design a user friendly system. (As well as, the Android app)
 - Second, we need to build a balancing web page the layout.
- Functionalities:
 - Planned to add more optional features to our project.
 - First need to finish the two key functions (upload pictures and add comments to the cases)
 - Then, if we have time left, the “help button” and “zoom in and zoom out” function will be added later.
- More Auto testing:
 - We need to add more Auto test cases, in order to improve the quality of our project.
 - First, we need to learn some Auto testing tools on HTML; for example, seleniumHQ.
 - Second, we need to apply the technique to our project, for example, we can use it the User Story #11, 12, etc.
